ICELAND-INV18

Uptaking the EN eInvoicing by
public authorities in Iceland

Our goal

The main objective of this project is to support the uptake of the European eInvoicing Standard (EN16931) required by the Directive 2014/55/EU, including both syntaxes (UBL 2.1 and CII) by eight Icelandic public institutions, allowing them to receive and process EN compliant invoices

Co-financed by the Connecting Europe
Facility of the European Union

DIRECTIVE 2014/55/EU

The Directive 2014/55/EU aims at promoting the eProcurement system among public administrations. In fact, since April 2019 public administrations have the obligation of accepting digital invoices.

Through this project, eight public entities from Iceland will update their systems and will be able to process electronic invoices from any country.

eInvoicing

Benefits of eInvoicing*

- Digital invoices provide significant savings such as reduction of costs of printing, postage, intra-office routing and archiving are reduced.
- Data machine-readable eInvoices. Reduces the need of entering the invoice information into an AP system, saving human resources and reducing errors in data entry.

Why standardization?

The variety of e-Invoicing formats across EU causes complexity and high costs for business and public entities. In order to boost the single market, Europe agreed to introduce a European Standard for eInvoice. Therefore, the Commission has created a norm for a infrastructure that is being supplied by providers on the market.
